## **GENERAL NOTES**

- (1) Option "K" is designed and tested for use with printed circuit boards or ring/fork terminals having a thickness between 0.031 and 0.093 inches (0.79 to 2.36 mm), and loads rated up to 50 Amps. For higher load currents, the "K" standoff temperature must not exceed 105°C.
  For additional application assistance please contact Sensata Technical Support.
- (2) All parameters at Tc=25°C unless otherwise specified.
- (3) Heat sinking required, see derating curves.
- (4) Low current loads and high ambient temperature can affect turn-on time.
- (5) 8VDC minimum control voltage. Resistive loads only. Consider switching losses; at maximum frequency reduce to 75% output current.
- (6) Increase minimum voltage by 1V for operations from -20°C to 40°C.
- (7) Decrease maximum control voltage 1.35V/°C above 80°C ambient temperature.
- (8) All parameters at 50% power rating and 100% duty cycle (contact Sensata tech support for detailed report).
