L4973V3.3 - L4973V5.1
L4973D3.3 - L4973D5.1

3.5A STEP DOWN SWITCHING REGULATOR

- UP TO 3.5A STEP DOWN CONVERTER
- OPERATING INPUT VOLTAGE FROM 8V TO 55V
- 3.3V AND 5.1V (±1%) FIXED OUTPUT, AND ADJUSTABLE OUTPUTS FROM:
  0.5V TO 50V (3.3V type)
  5.1V TO 50V (5.1 type)
- FREQUENCY ADJUSTABLE UP TO 300KHz
- VOLTAGE FEED FORWARD
- ZERO LOAD CURRENT OPERATION (min 1mA)
- INTERNAL CURRENT LIMITING (PULSE BY PULSE AND HICCUP MODE)
- PRECISE 5.1V (1.5%) REFERENCE VOLTAGE EXTERNALLY AVAILABLE
- INPUT/OUTPUT SYNCHRONIZATION FUNCTION
- INHIBIT FOR ZERO CURRENT CONSUMPTION (100µA Typ. at V_{CC} = 24V)
- PROTECTION AGAINST FEEDBACK DISCONNECTION
- THERMAL SHUTDOWN
- OUTPUT OVERVOLTAGE PROTECTION
- SOFT START FUNCTION

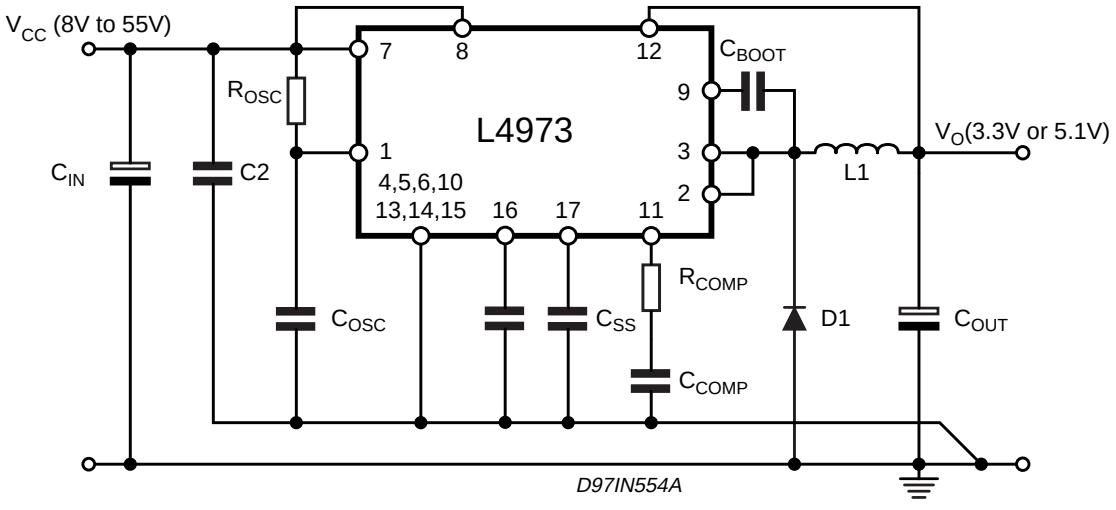
L4973D5.1 (SO20)

DESCRIPTION

The L4973 is a step down monolithic power switching regulator delivering 3.5A at fixed voltages of 3.3V or 5.1V and using a simple external divider output adjustable voltage up to 50V.

Realized in BCD mixed technology, the device

TYPICAL APPLICATION CIRCUIT (POWERDIP)



uses an internal power D-MOS transistor (with a typical Rdson of 0.15ohm) to obtain very high efficiency and very fast switching times.

Switching frequency up to 300KHz are achievable (the maximum power dissipation of the packages must be observed).

A wide input voltage range between 8V to 55V and output voltages regulated from 3.3V to 40V cover the majority of the today applications.

Features of this new generation of DC-DC converter includes pulse by pulse current limit, hiccup mode for output short circuit protection, voltage feed forward regulation, soft start, input/output synchronization, protection against feedback loop disconnection, inhibit for zero current consumption and thermal shutdown.

Packages available are in plastic dual in line, DIP-18 (12+3+3) for standard assembly, and SO20 (12+4+4) for SMD assembly.

PIN FUNCTIONS

Powerdip	SO20	NAME	DESCRIPTION
11	12	COMP	E/A output to be used for frequency compensation
10	11	INH	A logic signal (active high) disables the device (sleep mode operation). If not used it must be connected to GND; if floating the device is disabled.
9	10	BOOT	A capacitor connected between this pin and the output allows to drive the internal D-MOS.
18	20	SYNC	Input/Output synchronization.
7,8	8,9	Vcc	Unregulated DC input voltage
2,3	2,3	OUT	Stepdown regulator output.
12	13	VFB	Stepdown feedback input. Connecting the output directly to this pin results in an output voltage of 3.3V for the L4973V3.3 and 5.1V. An external resistive divider is required for higher output voltages. For output voltage less than 3.3V, see note ** and Figure 32.
16	18	V5.1	Reference voltage externally available.
4,5,6 13,14,15	4,5,6,7 14,15,16,17	GND	Signal ground
1	1	OSC	An external resistor connected between the unregulated input voltage and Pin 1 and a capacitor connected from Pin 1 to ground fixes the switching frequency. (Line feed forward is automatically obtained)

ELECTRICAL CHARACTERISTICS (Refer to the test circuit, V_{CC} = 24V; T_j = 25°C, C_{OSC} = 2.7nF; R_{OSC} = 20KΩ; unless otherwise specified) ● = specifications referred to T_J from 0 to 125°C.
